Objective

Final year B.Tech. Information Technology student getting skilled in software engineering, web technologies, context engineering & data engineering. Interested in solving real-world problems and building practical technology solutions. Seeking opportunities to contribute to impactful technology projects, collaborate with cross-functional teams, and grow through hands-on industry experience.

Education

Banasthali Vidyapith Jul 2023-May 2027
B.Tech – Information Technology CGPA:7.82/10 (6 Sems)

Ryan International School
Class XII (CBSE) 2023 - 75%
Class X (CBSE) 2021 - 94%

Technical Skills

Languages: Python, C, C++, Java, JavaScript **Web:** HTML, CSS, React.js, REST APIs
Databases: MySQL, MongoDB, Supabase **Tools:** Git, GitHub, Postman, Vercel, Netlify
CS Core: OOP, DBMS, Software Engineering **Practices:** Agile, SDLC, Web Scraping, API Integration

Experience

Software Engineer Intern | Findem May 2025 – Jun 2025

- Used the company's web scraping tool to scrape data and verify whether their listed websites were providing data in JSON format, then exported the data to MongoDB Compass.
- Conducted DRA(data risk analytics) on the company's internal web application, identifying existing issues and suggesting potential feature improvements.
- Built a Python-based web scraping tool for leadership webpages to extract data and save it in JSON format.
- Developed a frontend for the scraper and integrated it into a Chrome extension, enabling direct access to scraped data without using the browser debugger or external links.

Projects

BanVerse | AI-Powered Student Platform Link
React.js, Node.js, Python, MongoDB Atlas, JavaScript, HTML, CSS, Vercel, Oracle VM VirtualBox

- Built an AI-powered platform during pre-final year project work, to improve student club engagement within the university, featuring chatbot-based grievance handling and recommendation systems. Implemented user validation using Banasthali email IDs.
- Contributed to project deployment, presentations, testing, and feature improvements. Deployed the application on a virtual machine for the official demonstration and on Vercel to provide a stable and accessible deployment link.

Knifork | AI Doc Gen Link
React.js, JavaScript, HTML, CSS, Streamlit, Groq, Vercel

- A stand alone modern Streamlit-based web application that generates professional, long-form documents, reports, and books using AI.
- Powered by Groq's high-speed LLMs, the application dynamically designs table of contents, plans chapters, and writes content with high narrative continuity and minimal repetition.

Smoky Weeks | Productivity Web App Link
React.js, Vite, Supabase, JavaScript, HTML, CSS, Vercel, REST APIs

- Developing a gamified task manager to help users improve their schedules, daily task management, and engagement with real-life work and responsibilities. The platform features XP/leveling, leaderboards, and progress analytics, and is designed to reduce unnecessary time-wasting activities and excessive scrolling.
- Building the full-stack application with deployment on Vercel.

ACE Your Day | Student Management System Link
C++, Object-Oriented Programming (OOP)

- Built a C++ student scheduler during my 2nd year using OOP concepts. The application helps students manage daily tasks, to-do lists, assignments, attendance, and academic tracking. Included basic games to improve student engagement and our team(Project assignment) was ranked among the Top 15 out of 50 projects.

Certifications & Achievements

- Google Cloud Skills Boost Arcade 2025 – Completed 100+ cloud labs; earned Arcade Novice Tier.
- AlgoUniversity Tech Fellowship 2024 – Ranked Top 4% among 20,000+ participants.
- Secured 2nd Place, BV-Literati Face Painting Competition. (Theme-Mythology).
- Participated as a Filler (Anchoring) during the university Tech-Fest Mayukh in 2025 and 2026.
